

## Research Networking Programmes

### Science Meeting – Scientific Report

**The scientific report (WORD or PDF file - maximum of seven A4 pages) should be submitted online within two months of the event. It will be published on the ESF website.**

**Proposal Title:** *Workshop on advanced ab-initio simulations of materials under extreme pressure conditions*

**Application Reference N°:** 5252

#### 1) Summary (up to one page)

In the framework of the 52nd European High Pressure Research Group (EHPRG) International Meeting held in Lyon, France from 7 to 12 september 2014 we organized a one day workshop focused on the use of advanced ab-initio simulations of materials under extreme conditions.

The 52<sup>nd</sup> EHPRG gathered 235 participants of the European high pressure community of physics, chemistry, geosciences, engineering and other fields as food processing, biosciences or medical applications.

The 52nd EHPRG Meeting was coupled with the UNESCO International Year of Crystallography and special sessions on Crystallography under extreme conditions were also organized. It is without saying the importance of the coupling of advanced crystallographic techniques with state-of-the-art predictive tools to explore the possibilities of synthesis of new materials or to refine models of the Earth interior as well as the composition of other planets.

The International Scientific Advisory Committee of the EHPRG has been chosen to participate together with the organizers to the selection of invited and oral contributions. The SAC constituted of 26 members counted with 4 theoreticians which together with the two chairs of the ab-initio advanced workshop were charged on the program organization.

**2) Description of the scientific content of and discussions at the event (up to four pages)**

Materials and molecules under high pressure constitute an excellent benchmark to test the predictive capabilities of ab-initio simulations and it has strongly contributed to the development of DFT.

This workshop, consisting on 1 plenary session, two parallel sessions and a poster session was chaired by M. Marques and R. Caracas, members of the Organizing Committee of the 52nd EHPRG. *All sessions of the workshop were open to all participants to the EHPRG Conference.*

Prof. Yanming MA, Univ. Jilin, China was the plenary speaker and presented the advances of particle swarm method for structure prediction. He showed how the prediction of atomistic structures with the given information of chemical compositions at chosen pressure conditions becomes crucially important. However, it is an extremely difficult as it basically involves classifying a huge number of energy minima on the energy surface. He presented the CALYPSO approach for structure prediction based on the particle swarm optimization algorithm, describing how the method takes the advantage of swarm intelligence and smart learning. After giving a short introduction into the principle of CALYPSO structure prediction method he showed applications into the exploration of novel high-pressure structures. Examples of the exotic physics and chemistry not accessible at ambient pressure were revealed. Examples included the prediction and its later experimental confirmation of insulating electride lithium, out-of-imagination cage structure of polymeric nitrogen or spiral chain form of oxygen. Unexpected chemical reactions of Fe and Xe, and Ca and H<sub>2</sub> at extreme conditions with the formation of unusual stoichiometries were also reported. Reaction of Fe and Xe in the conditions of Earth core might provide a possible solution of the “missing Xe paradox”

In the corresponding oral sessions and poster session, there was presented a high variety of modelization of the electronic interactions in high pressure systems. An important part of the contributions referred to structural prediction and their consequences on the thermodynamic properties (bulk modulus, sound velocity), electronic state (and transitions between insulator and metallic states) or, magnetic properties, between others.

**3) Assessment of the results and impact of the event on the future directions of the field (up to two pages)**

One main conclusion was the recognized capabilities of the present structural prediction methods which can now guide experiments on the realization of new unknown phases. The effect of temperature appears as the most challenging in order to apply such methods to planetary conditions in particular.

**4) Annexes**

- 4a) Programme of the meeting**
- 4b) Final Budget**
- 4c) Full list of speakers and participants**

## Annex 4a: Programme of the meeting

### One plenary talk

Plenary 4 FRIDAY	<b>ROOM: Auditorium Malraux</b> <b>Chair: J.M. Recio</b>
09:00- 10:00	<b>Exploring Novel Physics and Chemistry at Extreme Conditions: A Leading Role of Swarm-Structure prediction</b> <u>Yanming Ma</u>

### Two parallel sessions

Session 18 WEDNESDAY	<b>Theory 1</b> <b>ROOM : 3</b> <b>Chair: A. Muñoz</b>
10:30- 10:50	<b>Computational evidence of a silicon carbonate structure stable at high pressure</b> <u>A. Morales-Garcia</u> , M. Marqués, J. M. Menéndez, V. G. Baonza, J. M. Recio
10:50- 11:10	<b>Compressibility of carbonated glasses</b> <u>Razvan Caracas</u>
11:10- 11:30	<b>Electronic, elastic and vibrational properties of yttrium aluminium garnet under high pressure from ab initio studies</b> <u>V. Monteseguro</u> , P. Rodriguez-Hernandez, F. J. Manjon, V. Lavin and A. Munoz
11:30- 11:50	<b>Pressure dependence of binary phase diagrams from sound velocity measurements</b> <u>M.Emuna</u> , Y. Greenberg, E.Yahel, <u>G. Makov</u>

Session 20 THURSDAY	<b>Theory 2</b> <b>ROOM : 2</b> <b>Chair: Y. Ma</b>
13:30- 14:00	<b>Progress in theoretical description of pressure induced phase transitions</b> Invited <u>I. A. Abrikosov</u> , M. Ekholm, Q. Feng, J. M. Wills, I. Yu. Mosyagin, L.V. Pourovskii, L. Dubrovinsky
14:00- 14:20	<b>Quantum-driven phase transition in high-pressure ice</b> <u>Yael Bronstein</u> , Philippe Depondt, Fabio Finocchi, Antonino Marco Saitta
14:20- 14:40	<b>Ab-initio Thermodynamics of High Pressure phases of polymeric Nitrogen</b> <u>S.Uma Maheswari</u> , Karsten Albe
14:40- 15:00	<b>Understanding phonon-driven superconductivity in group-IV layered superconductors in a single electronic picture</b> <u>Jose A. Flores Livas</u> , Antonio Sanna

## One poster session

Theory and Modelling	
P95	<b>Thermodynamic properties of titanium group metals from ab-initio calculations</b> <u>Uri Argaman</u> , Eitan Eidelstein, Ohad Levy, Guy Makov
P96	<b>Influence of pressure on phase stability of binary and multicomponent alloys</b> <u>S. A. Barannikova</u> , A. M. Zharmukhambetova, A. Yu. Nikonov, A. V. Dmitriev, A. V. Ponomareva, I. A. Abrikosov
P97	<b>Theoretical investigation of the collapse of single, double and triple wall carbon nanotubes under hydrostatic pressure</b> <u>T.F.T. Cerqueira</u> , S. Botti, A. San-Miguel, M.A.L. Marques
P98	<b>High-pressure behavior of electron structure and electronic transport properties of europium</b> <u>V.V. Gapontsev</u> , N. V. Morozova, S. V. Ovsyannikov, V. V. Shchennikov
P99	<b>Review on distorted face-centered cubic phase in yttrium via genetic algorithm</b> <u>T. Ishikawa</u> , T. Oda, N. Suzuki, K. Shimizu
P100	<b>Guest-Host Interactions in Gas Clathrates Hydrates Under Pressure</b> <u>F. Izquierdo-Ruiz</u> , A. Otero-de-la-Roza, J. Contreras-Garcia, J. M. Menendez, O. Prieto-Ballesteros, J. M. Recio
P101	<b>Tetrahedral polymorphs of Silicon obtained by structure searching</b> <u>A. Mujica</u> , C. J. Pickard, R. J. Needs
P101-A	<b>First-principles study of structural and dynamical properties of orthorhombic GaPO4 under hydrostatic pressure</b> M. A. Padron-Brito, J.O Gonzalez-Lopez,, P. Rodriguez-Hernandez, <u>A. Munoz</u>
P101-B	<b>Band structures and band gaps of dense hydrogen ---GW calculation</b> Hitose Nagara, Takahiro Ishikawa, and Takao Kotani
